

**Question 1**

Correct

Mark 1.00 out of 1.00

[Flag question](#)

Write a program to add digit from a given 9-digits number according to the following conditions:

1. If the middle digit is an odd number, add all digits which are in the odd position.
2. If the middle digit is an even number, add all digits which are in the even position.

Note that the position starts at 0 index (even number).

For example:

Input	Result
214532369	14

	Input	Expected	Got	
✓	214532369	14	14	✓
✓	938524187	27	27	✓
✓	298103857	25	25	✓
✓	111242799	22	22	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.
